Blockchain Web Services

White Paper (v4)

"Blockchain Everywhere, for Everyone"

&

NFT Game CUBE, a BWS Marketplace Solution

Abstract

Blockchain Web Services (aka BWS) aims to transform the blockchain market by making innovative solutions accessible to a broad audience, including those without technical or Web3 experience.

Under the "Blockchain Everywhere, for Everyone" vision, BWS provides a comprehensive suite of APIs, platform protocols, and solutions that strip away the complexities traditionally associated with blockchain. This empowers developers and enterprises to seamlessly create Web3 solutions tailored for mass-market adoption, bridging the gap between blockchain technology and everyday users.

This white paper presents BWS's strategic vision, technical architecture, the pivotal role of the BWS token, and the roadmap for building a scalable and sustainable blockchain platform ecosystem.

Blockchain Everywhere, for Everyone

---

1. Introduction

Blockchain technology is often perceived as complex, with technical barriers that hinder its reach to the mass market. Blockchain Web Services (BWS) breaks down these barriers with a robust set of APIs that empower developers to create blockchain applications that are easy for end-users to navigate without requiring Web3 knowledge.

BWS combines a powerful API and a dedicated marketplace, enabling Web3 creators to build, distribute, and monetize their products within a user-friendly platform.

This approach bridges the gap between blockchain innovation and mainstream adoption, giving customers a seamless experience where using blockchain is as intuitive as any traditional app—supported by the trust and reliability of the BWS ecosystem.

A platform for end customers to enjoy a seamless blockchain experience.

---

2. Mission Statement

The mission of Blockchain Web Services (BWS) is to launch blockchain solutions that democratize access to the technology, reach mass markets, and drive profitability under the slogan "Blockchain Everywhere, for Everyone."

As a user-centric platform, BWS is committed to providing seamless and easy blockchain experiences for developers and end-users. Its intuitive APIs simplify blockchain development, while the platform ensures ease of use for non-technical and mass-market users.

Key aspects of the Blockchain Web Services mission include:

- **User-Centric API**

  BWS offers a suite of user-focused APIs, providing a seamless experience for end customers and making blockchain accessible and easy to use.

  "User-centric" means that blockchain complexities are fully managed in the background, ensuring a seamless user experience.

- **Solutions Marketplace**

  Blockchain Web Services provides a distribution channel for blockchain solutions to reach the market and be consumed.

- **Blockchain Agnostic**

  BWS's blockchain-agnostic design allows developers to select the most appropriate blockchain network for their use case, optimizing their solutions for cost, speed, and technical needs, ensuring a scalable, user-friendly experience that meets the demands of mass-market applications.

A user-centric blockchain solutions marketplace.

---

3. Strategy

BWS's core strategy focuses on building an inclusive blockchain ecosystem that empowers developers to create solutions that can reach mass markets. To drive such strategy and growth, we plan the following key initiatives:

- **BWS Token Launch**

  A native token will serve as the backbone of the BWS ecosystem, funding the development of new solutions and driving growth in the marketplace.

  The BWS token will be used as a fee for API calls, creating a sustainable model where these fees directly support and reward developers who contribute solutions to the marketplace.

  By powering API transactions, the token ensures continuous innovation and development while incentivizing developers through token rewards for their contributions to the ecosystem. This mechanism creates a self-sustaining cycle of development, innovation, and growth.

- **Development of showcase solutions**

  Blockchain Web Services will launch flagship solutions to engage the market and demonstrate the traction of its solutions marketplace.

  A prime example, detailed later, is NFT Game Cube, the first revenue-ready solution on the BWS marketplace. This solution enables sports clubs to tokenize their game fields, allowing fans to participate in a new, interactive experience where they can engage with the game and win rewards.

A platform to involve the community in the principles for blockchain mass adoption.

---

4. BWS Token Model

The BWS token model ensures long-term funding for solutions on the BWS Marketplace while promoting sustainable growth and innovation in the blockchain ecosystem.

The tokenomics are structured to drive value creation, support developer incentives, and maintain a self-sustaining economy within the platform. Core Elements of the BWS Token Model:

1. **BWS Token Utility as API Fee**

   The primary utility of the BWS token is to serve as a fee for API usage. End-customers will use the BWS tokens to pay for API calls when consuming blockchain marketplace solutions such as creating NFTs, certifying data, or storing information. These token-based API fees will directly fund the marketplace and provide financial rewards to developers for their contributions.

2. **Developer Grants and Funding**

   A portion of the TOKEN TOTAL SUPPLY will be allocated to the **BWS Developer Grants Program**, which provides funding to developers who create new solutions on the platform. This program encourages innovation by supporting projects that add significant value to the marketplace.

   Developers can apply for grants based on their solutions' utility, scalability, and marketplace impact.

3. **Marketplace Growth through Token Circulation**

   The token model is designed to create a **self-sustaining ecosystem** where increased platform usage leads to more token circulation and growth. Each API interaction generates token fees, which will be used to:

   - **Reward developers** for creating impactful solutions.
   - **Fund new marketplace innovations** through grants and ongoing development.
   - **Maintain liquidity** and ensure that tokens continuously flow within the platform, supporting developers and token market growth.

4. **Token Demand and Value Growth**

   Demand for BWS tokens will increase as more API calls are made and the marketplace expands. This creates a feedback loop where platform usage drives token circulation and value growth. The tokenomics are designed to align with marketplace activity, ensuring that as the platform grows, so does the value of the BWS token, benefiting both developers and token holders.

5. **Revenue Sharing and Developer Earnings**

Developers who list their solutions on the **BWS Marketplace** will earn tokens based on utility and usage. A portion of transaction fees from these interactions will be directed back into the developer's account to ensure long-term sustainability and continuous development.

This model ensures developers are fairly compensated for their innovations while contributing to the platform's overall health and growth.

The BWS token is the economic engine that powers the marketplace. It ensures continuous funding for developers, incentivizes innovation, and fosters a vibrant ecosystem of blockchain solutions.

Tokenomics

100 million $BWS

<u>Allocation of Tokens</u>

- **Circulating Supply, 70% (70 million BWS)**

  Most tokens will be available for public trading and use within the BWS ecosystem, ensuring liquidity.

- **Developer Grants, 10% (10 million BWS)**

  These tokens are allocated to support the BWS Developer Grants Program, providing funding to incentivize developers to build innovative solutions on the platform and contribute to the ecosystem's growth.

- **Team Tokens, 8% (8 million BWS)**

  Reserved for the core team, these tokens are allocated to incentivize and reward developers, advisors, and key contributors who help drive the growth and success of the BWS platform.

- **Marketing Tokens, 5% (5 million BWS)**

  Dedicated to promoting BWS, these tokens will fund marketing campaigns, partnerships, and promotional activities to expand the platform's reach and onboard new users and developers.

- **Partnerships & Airdrops, 5% (5 million BWS)**

Set aside for strategic partnerships, airdrop campaigns, and early supporters; these tokens will drive collaboration, reward early adopters, and expand the ecosystem.

- **Liquidity & Reserves, 2% (2 million BWS)**

  These tokens, allocated to ensure liquidity across decentralized exchanges and maintain stability within the BWS token ecosystem, will help maintain smooth transactions and price stability.

Dynamic Tax System (Maximum Total Tax: 8%)

Our innovative tax structure adjusts based on market cap to optimize stability and long-term growth:

- When the market cap is low, the buy tax decreases to encourage entry, while the sell tax increases to deter early exits and stabilize the price.
- As the market cap rises, the buy tax increases while the selling tax decreases, rewarding long-term holders and supporting organic price appreciation.

Tax Fund Allocation

Regardless of whether they applied on buys or sells, collected taxes are allocated as follows:

- **3% Product Development**
  Funds continuous improvements, new features, and innovation within the ecosystem.
- **2% Sales & Business Growth**
  Supports partnerships, business expansion, and adoption efforts.
- **2% Marketing**
  Fuels marketing campaigns to attract new users and developers.
- **1% BWS Developer Grants Program**
  Provides funding to developers building on the **$BWS** ecosystem.

This dynamic tax model ensures a fair and sustainable ecosystem by balancing incentives, reducing volatility, and fostering organic growth at every stage.

A scalable and sustainable platform that supports long-term growth and rewards all participants in the ecosystem.

---

6. BWS Architecture

BWS implements a robust, multi-layer architecture that ensures the platform is secure, scalable, and reliable:

- **Multi-layer architecture**

  BWS is built on three core layers—solutions marketplace, platform API, and platform Smart Contracts. This architecture facilitates seamless interactions between users and the underlying blockchain.

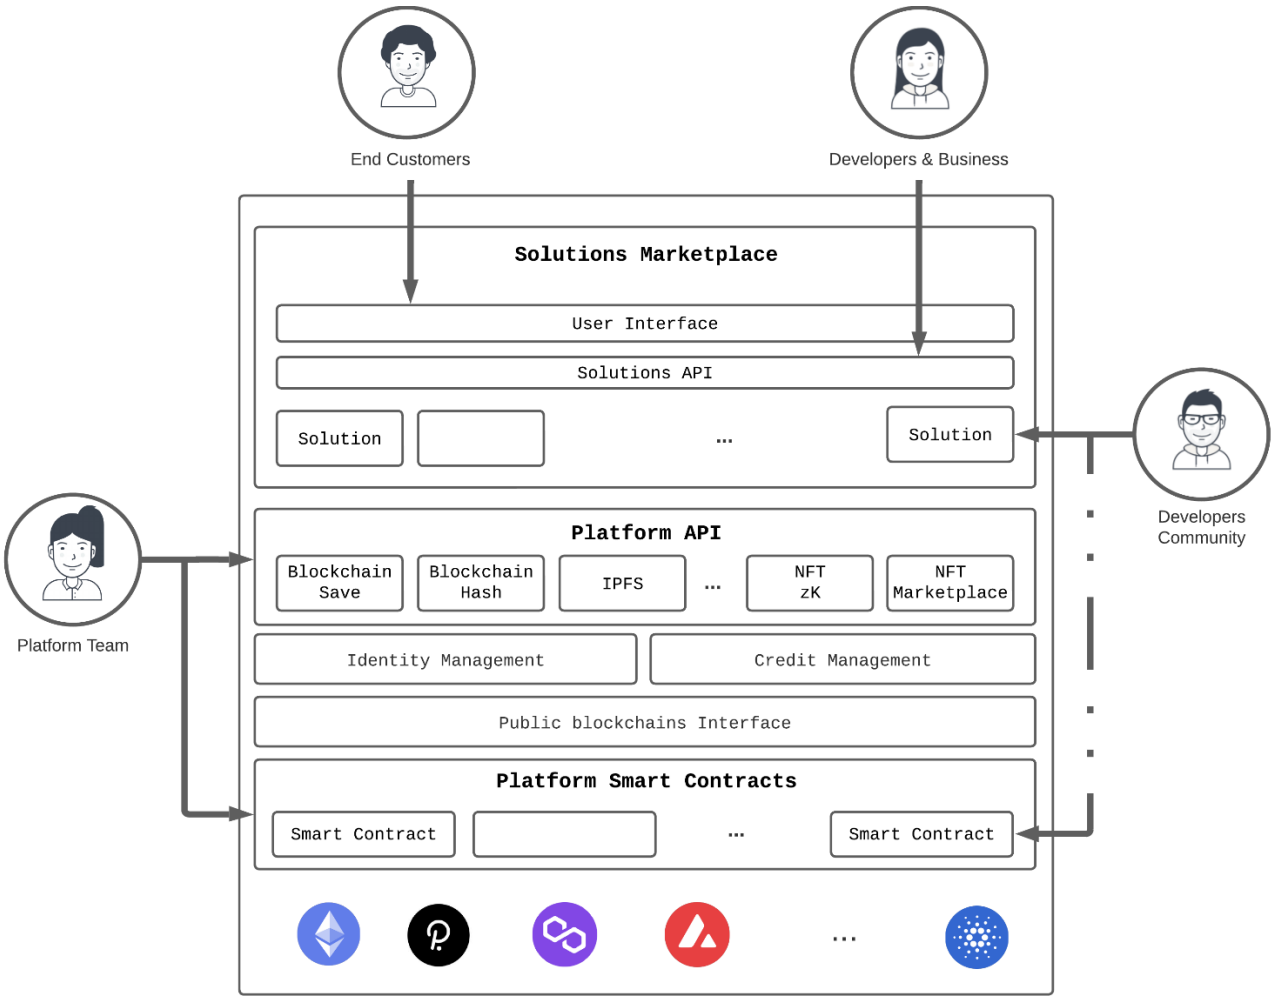

Figure 1. Blockchain Web Services platform is modular, enabling new solutions to be added easily.

Blockchain Web Services is built to enable external developers to add new features/solutions while maintaining a singular API signature.

Figure 2. All platform solutions in the marketplace use the same API signature

- **Security and auditing**

  The platform is designed with advanced security mechanisms, including smart contract audits, continuous transaction monitoring, and fail-safe measures to ensure data integrity and protect users.

- **Blockchain Agnostic APIs**

  The BWS platform is blockchain-agnostic, meaning API calls can be directed to different blockchain networks based on the solution requirements.

  This allows developers to select the most suitable blockchain for their projects, ensuring flexibility and scalability for various use cases. For instance, developers can choose between Ethereum, Polygon, or Binance Smart Chain, depending on transaction costs, speed, or other specific needs.

BWS.Blockchain.Save solution API call example

API request parameters

```
▼ smartContractCallJson {5}
    solution : BWS.Blockchain.Save
    version : 1
    network : polygon
    operation : save
  ▼ parameters {1}
      value : Hello World!
```

Figure 3 Deciding the blockchain to use is as simple as setting an API call parameter.

A secure, modular architecture enabling seamless integration across networks where developers can add new solutions for exponential growth.

---

5. NFT Game Cube, a flagship BWS Marketplace Solution

Blockchain Web Service's vision, "Blockchain Everywhere, for Everyone," aims to bring blockchain to mass markets through a user-centric API to build accessible, innovative solutions and a platform marketplace where the Web3 community can publish, share, and monetize blockchain applications.

To trigger initial traction, BWS will launch several flagship solutions to showcase the platform's capabilities and inspire further development from the community.

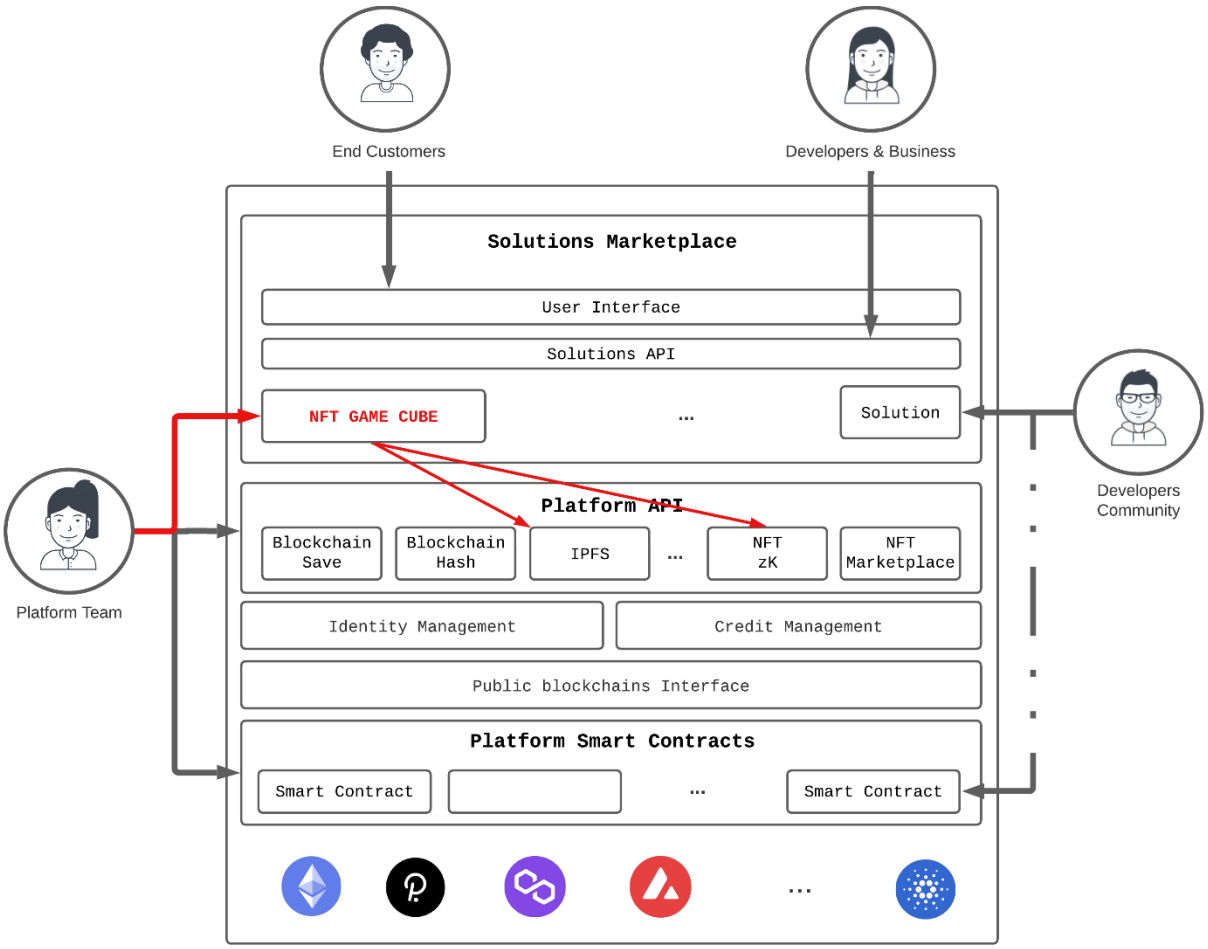

Figure 4. NFT Game CUBE Blockchain Web Services platform solution.

5.1 NFT Game Cube Overview

BWS's Fan Game Cube solution lets sports fans own digital assets tied to specific sections of a sports field—not only football but chess, tennis, cricket, and many more.

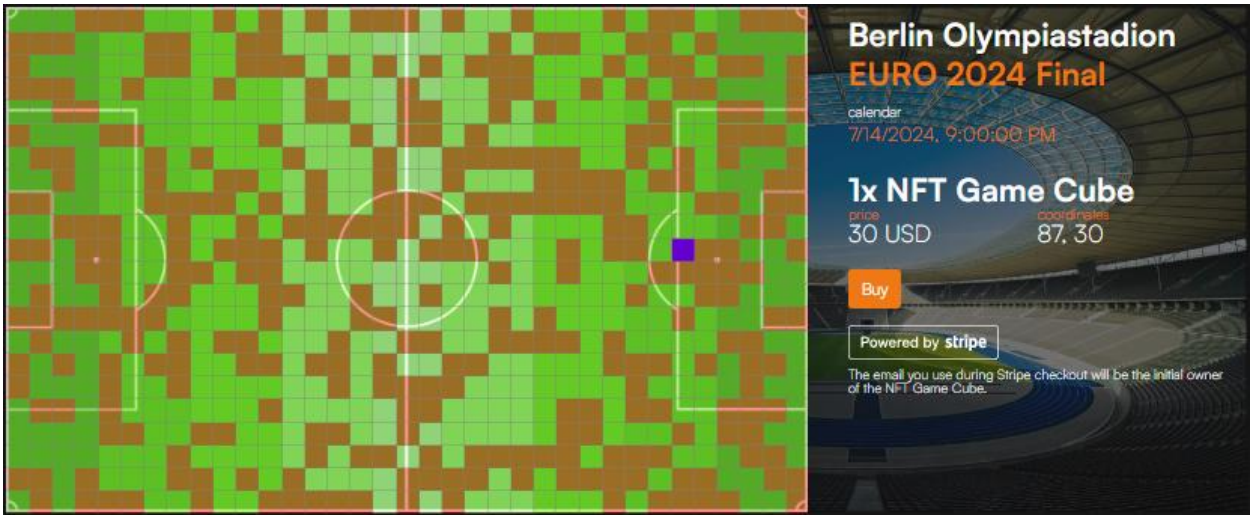

Figure 5. Tokenize and sell Sports Clubs field sections in just a few clicks (or API calls!).

As real-time events unfold at their location during the game, fans earn points, unlocking exciting rewards while creating a new revenue stream for sports clubs, former athletes, influencers, and anyone with a market in the sports industry.

- **NFT tokenization of game zones**

  Fans can purchase virtual cubes representing specific zones of a sports field as NFTs. Rewards are based on real-time events, such as a goal being scored from their purchased zone

- **Simplified NFT creation via BWS NFT.zK API**

  The BWS NFT.zK API will handle the technical complexity of creating NFTs. Fans can hold NFTs with only an email address, bypassing the need for a Web3 wallet or tokens, drastically reducing the barrier to entry.

- **Developer token-based fee structure**

  The solution owner (BWS team, in this case) earns BWS Tokens for each API call made when NFTs

are created, traded, or interacted with, rewarding the developer’s team to maintain and improve the solution.

Fan Game Cube is a scalable solution where fans can play multiple sports and hold a weekend chess tournament, a soccer VIP final, and a cricket yearly season. It's a new sports fan experience.

Figure 6. NFT Game CUBE is valid for any sport that has a "field"!

A B2B2C platform solution that provides a new revenue stream for any sports club worldwide, everything built on top of the Blockchain Web Services platform.

6. Empowering Innovation: Introducing the BWS Developer Grants

Recognizing the importance of building a vibrant developer ecosystem, we are excited to introduce the **BWS Developer Grants**—a program designed to incentivize developers to build tools and applications on top of our platform protocols, rewarding them for their contributions.

The initiative will maintain a development fund to support growth efforts, focusing on fostering innovation within the BWS ecosystem.

Program Overview

The BWS Developer Grant is a developer-focused program promoting creativity, experimentation, and adoption of the BWS platform. Developers are invited to propose and build innovative projects such as decentralized applications, innovative smart contracts solutions, and integration tools that leverage the capabilities of BWS. Selected projects will receive grants in BWS tokens.

Incentives

Developers who participate in the BWS Developer Initiative will benefit from:

1. **Bounty Payments**

   Developers whose projects are selected for integration with BWS will receive bounty payments based on the complexity and impact of their projects.

2. **Recognition and Exposure**

   Featured projects will be showcased on the BWS website, social media, and promotional channels, giving developers visibility and recognition within the blockchain community.

3. **Technical Support and Resources**

   The BWS team will provide developers access to technical support, detailed documentation, and resources to streamline development.

4. **API Fees**

   Once your application is published, you will receive a fee in $BWS tokens every time your APIs get called.

Program Guidelines

To participate in the BWS Developer Initiative, developers must submit proposals detailing their project's objectives, implementation plans, and alignment with the BWS ecosystem. Projects should demonstrate innovation, technical feasibility, and the potential to add value to the BWS ecosystem.

Collaboration and open-source development are encouraged to foster community-driven innovation.

Examples of Eligible Projects

1. **Tokenization of Environmental and Social Impact Projects**

   Create platforms for tokenizing ESG assets like carbon credits using the BWS.ESG API to certify, track, and trade green assets. This application could revolutionize the way sustainable investments are managed and verified.

2. **NFT-Based Asset Verification Platforms**

   Build applications that allow businesses or individuals to tokenize physical or digital assets, such as property or artwork. The NFT.zK API can provide verifiable proof of ownership and authenticity.

3. **Gaming and Entertainment NFTs**

   Develop NFT-based games or fan engagement platforms that allow users to tokenize experiences and interact with digital assets in new ways. The BWS NFT.zK API simplifies the creation and management of these digital assets.

By empowering developers with financial incentives, technical resources, and recognition, the BWS Grants initiative will foster innovation and accelerate the growth of the BWS ecosystem.

15. Conclusion

Blockchain Web Services is paving the way for broader blockchain adoption through its accessible API solutions, inclusive marketplace, and powerful tokenomics.

By lowering the barriers to entry and incentivizing developers, BWS is set to become a key player in the future of blockchain. With "Blockchain Everywhere, for Everyone" as its guiding principle, BWS will deliver innovative solutions that empower users of all technical backgrounds to engage with blockchain technology and transform their digital experiences.

A platform protocol bringing blockchain growth to the mass markets.

END.
